FEDERAL COMMUNICATIONS COMMISSION OFFICE OF SECRETARY

## VIA HAND DELIVERY

Washington, D.C. 20554

Mr. William F. Caton Acting Secretary Federal Communications Commission 1919 M Street, N.W. Room 222

Re: Ex Parte Presentations in CS Docket No. 95-184

Dear Mr. Caton:

Pursuant to Section 1.1206(a) of the Commission's Rules, 47 C.F.R. § 1.1206(a) (1995), this is to provide an original and one copy of a notice of *ex parte* presentations made in the above-referenced rulemaking proceedings on behalf of Residential Communications Network, Inc. ("RCN"). Mr. Scott Burnside of RCN, Karen M. Eisenhauer, Esq. and the undersigned met with Commission officials in the Cable Services Bureau and the Competition Division of the General Counsel's Office to discuss issues and positions raised in the filing made by RCN in the above-referenced proceeding. Copies of the written materials provided to the meeting participants are attached hereto for the public record.

Should any further information be required with respect to this ex parte notice, please contact the undersigned.

Respectfully submitted,

**Jean** L. Kiddoo

# Firm offers cable, phone and Interpet in 1 package

By Bruce Mohl CLOSE STAPF

For the 90 condominium owners at 416 Marlborough St., the benefits of telecommunications competition have just arrived.

In a foretaste of what the future may hold for wany of us, a company called Residential Communications Network is offering cut-rate prices and one-stop shopping for cable televisien, Internet some and local and long-distance telephone service.

BCN undercuts Nymm rates by at least ≈ 15 percent and is currently offering a host

rently offering a host
of services like call forwarding and call waiting for free. It beats Sprint's long-distance,
the ing for free. It beats Sprint's long-distance,
of rates by several cents a minute, shares \$5
off Cablevision of Boston's expanded basic
cable service and provides unlimited Internet seems for \$19.95 a month.

"We think it offers a real value to the residents," said Nancy Beoles, who works for the Finch Group, which manages the Marthorough street building. "It brings a building that's 100 years old into the 21st castury and it increases the value of the units."

But even though RCN is harely up and

But even though RGN is herely up and number it is already under attack. Competitions say RGN's guerrilla-style marketing approach of targeting selected customers gives
RCN, Page 32

# Firm offers cable, phone, Internet in 1 package

Captinged from Page 29

traduntair advantage. Cablevision Secured RCN in court of illegally cadding a cable company without a secure.

"In order to practice medicine, from must be a licensed physician. Consumers should be very wary of any company offering to sell them cable service before it has received any required licenses," said P.A. Carr, director of public affairs for Cablevision.

David C. McCourt, RCN's 39year old chief executive, said his companyis complying with all state and federal laws. He said his competitors are actacking him because RCN is challenging their monopo-

Yet RCN is operating in what appears to be a murky area. The tele-communications, field is changing fast, with many of the rules of compatition being developed on the fly. Regulatory wires are getting crossed as cable operators move toward offering phone service and phone companies move into the video field.

RCN is stretching these regulatory boundaries more than anyone else by offering customers voice, video and data services over its highquality fiber optic lines, "Everybody's talking about doing it, but nobody's doing it except us." McCourt said.

White RCN is an unfamiliar name to consumers, it actually has strong credentials in the telecommunications field. McCourt, who helped build Cablevision's network a decade ago and has said telecommunications services here and in

England, owns 10 percent of the company. The rest is controlled by the giant contracting firm Peter Kiewit Sons lac. of Omaha.

Several years ago Kiewit formed a company called MFS Communications Co. to build fiber optic networks in urban areas to provide telephone service to large companies. The company has since sold shares to the public and is generating more than \$560 million in annual sales.

RCN is trying to adapt the same concept to the residential community, leasing the trunk lines in Boston owned by MFS and connecting them to apartment and condo buildings in the Back Bay. McCourt says RCN will later expand to the rest of Boston and the suburbs.

RCN's local phone service mimics the calling plans and services offered by Nynex last is priced 15 nercent less. At least initially, RCN is offering customers touch tone service, call waiting, call forwarding, three-way calling and speed calling a package that costs Nynex customers \$11.38 a month - for free.

Long-distance service is provided at fixed rates of 20 cents a minute weekdays from 7 a.m. to 7 p.m., and 9 cents a minute at all other times. By comparison, Sprint's rates are 25 cents a minute weekdays during the day and 10 cents a minute at night and on weekends.

Anyone switching their phone service to RCN cannot take their current phone number with them; they must be assigned a new one. They also can't buy RCN's local service and use another company for long distance, although McCourt said that rule may change.

RCN's expanded basic cable ser-

vice is priced at \$24.95, which compares to \$30.67 for Cableviaion's equivalent package. Premium channels are priced about 5 percent less than Cableviaion's rates, McCourt said. RCN's Internet access will be available Aug. 1, McCourt said.

Competitors say RCN is able to provide these lower rates because it basically cream-skims the market, picking off the customers it wants and leaving behind the customers that are more costly to reach.

Carr said Cablevision could lower its prices if it didn't have to provide local programming, pay \$1.8 million a year in franchise fees to the city of Boston, wire and provide service to all of the city's schools and municipal buildings at no charge and offer service to all neighborhoods of the city.

"There can't be one set of rates for one competitor and no rates whatsoever for someone else." Carr said.

Nynex spekesman John Johnson said consumers should pay attention to quality of service as well as price in selecting a company. "We don't know what kind of quality of service they will provide," Johnson said, referring to RCN. "It's always going to be buyer beware when you change providers."

McCourt said it would be unfair for regulators to saidle a startup company like his with the same hurdens as an established monopoly. If they did, he said, there would never be any real competition.

"The stuff that the other guy has to do that I don't have to do - that's what you get with being a protected monopoly," he said. Weight has medications. Local health insurers are starting to issue guidelines for the use of hot new weight-loss medications, but the rules vary from plan to plan.

Harrard Pilgrim Health Care said it will pay for the new drug Rethix as well as for fen-phen, the abbreviation for the drug combination fenfluramine and phantermine. Blue Cross Blue Shield says it will only pay for Redux. Both health plans require patients to meet certain weight specifications and participate in weight reduction programs.

Another option is to use one of the weight-loss centers springing up around the city that specialize in offering customized treatment programs for patients. The cost can approach \$1,000 over the course of a year and health insurance generally won't cover it, but center officials say 2 may be worth it

"Obesity is not an easy disease to trest," said Dr. Edward Mascioli, who runs the Boston Center of Nutrition in Chestnut Hill. He notes that patients would not hesitate to consult a cardiologist if they had a heart problem.

One cautionary note: The Harvard Piliprim guidelines say FDA calculations indicate the risk of potentially lethal pulmonary hypertension from the use of weight-loss drugs is 1 in 109,000 for patients using the drugs longer than three months, compared to 1 in 1 million for the general population.

If you have a communer tip, call 474-2910, e-mail mahl@globe.com or unite Bruce Mohl at PO Box 2378, Boston, MA 02107-2918

# Apartment Dwellers First to Get All-in-One Telecommunications

ANT to see the future of telecommunications? Rent an apartment.

That's where the much ballyhoosed convergence of television, telephones, and the Internet is taking place first. And it's not being done by industry giants. A handful of small, virtually suboroun companies is taking advantage of several technologies to steal a merch on their higger competitors. Forget AT&T and TCI. Meet US Online and Peter Klewit Sons' Inc.

It's not hard to hook up spartment complexes and condominuous to the future. By sticking a telephone switch, cable-television link, and a few computers in the beautient, these companies are ready to roll. They already know who all their potential customers are, so marketing is easy. By healing up several large complexes in the same city, they can spread their costs over thousands of tenants.

In Boston, a Peter Kiewit Sons' subsidiary, ECN Corp., is marketing packages of telecommunications services to apartment dwellers and condomining owners. ECN acts as a kind of middleman. It buys local and long-distance telephone service from MPS Communications. It also buys cable-TV service wholesale. Then it resells the package to tenants.

Tenants have a choice of sticking with their current telephone and cable companies or switching to RCN. The advantage of the latter is that all services come from a single company, often at a slightly lower-price; and with more extras. RCN, for example, gives away some telephone services that the local company charges for, such as call-forwarding, call-waiting, and speed-calling. It also offers internet access.

By sticking a telephone switch, cable-television link, and a few computers in the basement, new companies can provide all a resident's electronic needs.

The company saves rhoney because the same fiber-optic cable and computers that carry and route all the telephone signals also transmit the cable-TV video and sound. That's what convergence is all about. All the telecommunications signals are being translated into the computer language of 1s and 0s, so a single wire, antenna, or satellite dish can carry them all.

Of course, big telecommunications companies are acrambling to do the same thing. Spurred by new legislation, America's cable and telephone companies went to play in each other's sandboxes. But doing this requires messive upgrades of their networks.

But debug this requires measive upgrades of their networks. By buying these services wholesale and then bundling them together, the smaller companies are proving to be more minible. US Online, for example, is only a year old but is already selling telecommunications packages to apartment dwellers in Dallas, San Antonio, and Austin, Texas, as well as Chicago, and expanding to Desver and Atlanta. So far, some 10,000 spartments are wired up or are being built to be hooked up to its services. Within a year, the company expects to have 40,000 units signed up.

Although the offerings are priced slightly lower than what the tenants would otherwise pay, the company's real focus is on service. "This is about making the customer happy," says John Orehek, a Seattle-based entrepreneur and part-owner of US Online. Other resulters who have tried the same thing – not to mention the cable and local-phone companies that until recently monopolized the business – have often turned off customers because of their lack of service.

The same resulters could also serve nursing homes and college computes, says Bill Davidson, a partner with Deloitte & Touche Consulting Group in Atlanta. "When you add all those things up, it's a market of significant size." By the year 2000, resulters and those operating their own locally based networks will grab 15 percent of local-telephone service and acarly 25 percent of the long-distance phone business, he forecasts.

But consumers won't see that. They'll see what apartment dwellers are beginning to experience: a single company filling all their telecommunications needs.

Cable Concern

Against Nynex

**Broad Phone Packages** 

Set for New York City

Plans a Fight

For five years, Liberty Cable and Time Warner Inc. have waged a David-and-Goliath battle for cable-television customers in Manhattan. Now, David is taking on an even greater Goliath.

The new owner of Liberty Cable, the RCN Corporation, plans to announce today that it will offer residential telephone service in New York City - challenging the Nynex Corporation. Under the RCN brand name, the company also plans to offer expanded cable service and access to the Internet.

When RCN opens its sales office in midtown Manhattan today, it will mark the (irst time that any company has offered New Yorkers television, telephone and data services in a single package. Nynex and Time Warner have each announced plans to offer such one-stop shopping, but neither has done so yet.

"We're going into the markets with the largest revenues in the country but the poorest service," said David C. McCourt, the chief executive of RCN, which stands for Residential Communication Networks. "Our strategy is to be a bit cheaper, but a lot better.

Mr. McCourt said RCN would offer cable and telephone service in Boston later this summer and in several other Northeastern cities in early 1997. The company acquired 80 percent of Liberty Cable in April as a vehicle for its drive into the New York market. And it plans to spend \$200 million over the next 18 months to build a fiber optic network capable of carrying television and telephone traffic.

In New York, Mr. McCourt asserted, RCN's monthly rates for basic cable and phone service would be 15 percent cheaper than those of Time Warner and Nynex. in addition, RCN plans to offer services like call waiting and call forwarding at no extra charge to customers who sign up early.

For all that, RCN will still face an uphill struggle against Nynex. The regional Bell operating company has three million residential customers in New York City and its copper wires snake into nearly every apartment building in the city.

Nor has Liberty Cable made much of a

# Cable Company Plans to Fight Nynex in Local Phone Market

Continued From First Business Page

0

dent in Time Warner's huge cable franchise. Despite its scrappy marketing and a shrewd strategy of focusing on large, affluent apartment buildings, Liberty has signed up just 34,000 customers. Time Warner, by contrast, has 1,2 million subscribers throughout the five boroughs.

Still, RCN could be a far more serious threat than Liberty Cable. The company is backed by Peter Klewit Sons Inc., a privately held industrial conglomerate based in Omaha, that has estimated revenues of \$3 billion.

And unlike Liberty Cable, which continues to use cumbersome microwave technology to beam its programming to satellite receivers on the roofs of apartment buildings. RCN plans to transmit its video and telephone service over fiber optic strands that run into the basements of the buildings.

To do that, Mr. McCourt said RCN would lease excess capacity on a fiber optic network built and owned by the MFS Communications Company, a telephone company that offers service to business customers in New York and 41 other American cities. MFS, like RCN, is backed by Klewit

Through MFS, RCN has already obtained regulatory approval to construct its network and deliver video programming over it.

Executives at Nynex and Time Warner, who have tended to dismiss Liberty Cable as a mite rather than a menace, said RCN's strategy and dipagnial muscle could make it a

more robust competitor.

"On the Richter scale, it's not a 10," said Brian Lane, the group vice president of marketing at Nynex. "But it's a 3 or a 4."

Richard C. Aurelio, the president of Time Warner Cable's New York City franchise, said that "\$200 miltion is a significant amount of money to spend if you're concentrating on New York."

Mr. Aurelio noted that Time Warner planned to spend \$500 million over the next four years to uperade its coaxial cable network to carry telephone and video services. But the company has not set a date for entering the local telephone market in New York City.

"Announcing new services is fine," he added, "but first, you've got to build the network to carry them."

Mr. McCourt said RCN would be in a position almost immediately to string fiber optic cable to the 200 apartment buildings that currently receive cable service from Liberty. He said RCN had won approval from landlords to wire buildings with 35,000 more potential customers.

Other buildings, however, face a ionner wait because RCN would have to obtain approval for wiring and then do the actual construction.

Indeed, at the moment, RCN is offering phone service in just four buildings, one of which happens to be Mr. McCourt's.

RCN's plan is to appeal first to customers who already receive Liberty Cable. To promote the service. Mr. McCourt has retained Peter O. Price, the former publisher of The New York Post, who ran Liberty Cable for the Milstein family, which

still owns a 20 percent stake. (Mr. Price and the Mileteins are suing Time Warner, accusing the company of anti-competitive business practices. But Mr. McCourt said that RCN was not a party to that lawsuit).

Yesterday, Mr. Price said he would use much the same guerrilla marketing approach to sell RCN's services that he used to promote Liberty. That includes tiny advertisements that have run almost daily

## An upstart company, with new backing. picks another fight.

at the bottom of the front page of The New York Times.

in the ads. Liberty Cable gives the address of a building that signed up for its service and then proclaims that the building "has been liberated from the cable monopoly."

Mr. Price said that RCN's fiber optic transmission would be easier to sell than Liberty Cable's microwave method, which required apartment buildings to install satellite receivers on their roofs. In both cases, the individual apartments receive the service via coaxial cable. To offer phone service. RCN plans to string copper wire to individual apartments or lease capacity on the existing copper network owned by Nynex.

"I used to walk on rooftops," Mr. Price said in a telephone interview

yesterday from abourd a chartered yacht in the Greek Islands, where he was on vacation, "Now, I'll be walking through basements."

Mr. Price will be able to offer customers some attractive rates in the early soing. RCN said its average monthly rate for standard cable service would be \$14.95, compared with \$30.12 for Time Warner. The commeny will after touch-tone phone service for \$8.58, versus \$10.10 for

But Nynex and Time Warner seem likely to fight back. Mr. Lane of Nynex said the company was negotiating a pertnership with an undisclosed company that would soon enable it to offer a backet of telephone and television services. Time Warner also intends to offer telephône service and package rates.

None of that seems to faze Mr. McCourt. Two days before he was scheduled to introduce his service, he proudly offered a tour of RCN's gifttering showroom, which covers 10.000 square feet in an office tower at 1133 Avenue of the Americas.

The centerpiece of the room is RCN's Network Operations Center. which is housed behind glass at the street level. There, at a control panel that looks like the bridge of a spacecraft, the company's engineers monitor RCN's network and can locate any glitches in service.

Mr. McCourt likened the open design to that of a fast-food restaurant with no wall separating the front counter from the kitchen. "We want people to see exactly what they're buying," he said, "That way, they'll know we're giving them hamburgers and not horse meat."

NEW YORK'S HOMETOWN NEWSPAPER

Thurnday, July 11, 1986

By PETER GRANT

was Business Write

A fledgling telecommunications company beat NYNEX and Time Warner yesterday in the race to be the first business to offer New Yorkers cable television, telephone and internct access service in one package.

But the city undercut Omaha. Neb.based RCN Corp.'s rollout by warning that it lacked the franchise license to offer the digital picture and 105 channels it is touting.

Meanwhile, two other telephone companies, Frontier Corp. and USN Communications, announced yesterday they will begin to offer businesses

local service late next year.

The news was just the latest sign of the growing consumer benefits - more services and lower prices -- from the fierce competition breaking out in the cable TV and telephone businesses.

RCN, which is being bankrolled by the \$3 billion conglomerate Peter Kiewet Sons, has gone so far as opening a dazzling street-level showroom at Sixth Ave. and 43d St. - to display its Internet, computer, telephone and television selections.

"Everyone else has talked about putting it all together," David McCourt. RCN's chief executive, said yesterday "We're the first to do it."

RCN is offering these products first in parts of Manhattan through a net work of fiber optic cable that aiready has been installed by MFS Communi cations, which offers telephone ser vices to businesses.

RCN has begun to wire apartment buildings that are accessible to the 97 mile network, which MFS is rapidly expanding. By the end of the year, the company hopes to be adding about 500 subscribers a week.

But Telecommunications Commis sioner Ralph Balzano said yesterday that RCN must obtain a city franchise before it can offer cable through the

NOULTIPLICITY: David McCourt, CEO of RCN, in high-tech area of Sixth Avenue headquarters with television program that shows him talking about company's big plans.

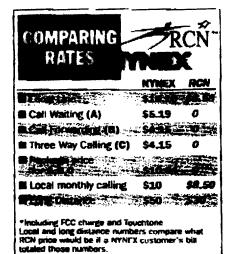

MFS network, a process that can take up to a year.

RCN officials claimed, however, that the recent change in federal telecommunications law exempts their kind of service from city franchise rules.

"I think the city will understand that it's in everybody's interest to have lower rates and better service," McCourt said.

Because fiber optic cable has much higher capacity than other wires, RCN can provide more channels and better quality television pictures, as well as a faster connection to the Internet.

RCN also plans to offer its services at lower prices. McCourt estimated that RCN would sell telephone services for 15% less than NYNEX. For example, a \$10 monthly local calling bill for NYNEX customers would cost \$8,50 using RCN, he said.

TELECOMMUNICATIONS

# READY, SET, DEVOUR?

AT&T wants to grab a third of the regional-calling market in a few years

t's the telecom world's version of a war council. Every week or so, about 15 arer executives meet at the company's Basking Ridge (N.J.) headquarters to discuss the latest maneuvers by the company and its opponents in the battle for a \$30 billion prize—local calling. The team, which has dubbed itself "Mission Control," was formed almost two years ago, but the members shifted into high gear in February. That's when the Telecommunications Act of 1996 became law and local calling markets were thrown open to competition.

Now, Mission Control is hopping. Headed by President Alex J. Mandl, the team has said plans for ATAT to get into local calling in every state by the end of 1997, with trials starting in five states on Sept. 1. ATAT Chairman Robert E. Allen spelled out his ambitious in the new market in a speech to investors on June 11: "We plan to take at least a third of the local market within a few years," he declared. Mandl says that ATAT not only will hit Allen's target but will also break even on local service in two to three years.

massion "maplassmale." Industry analysts aren't so sure. The only immediate path to local calling is to buy service from a regional phone company and resell it. That makes it unprofitable to offer deep discounts, the easiest way to grab customers from the entrenched former monopolies. "The economics of local resele simply can't yield such large market share gains," says Scott Cleiand, an analyst with the Washington Research Group, who terms Allen's goal "implausible."

There is one simple solution sell local service as a loss leader. Like other phone companies in the deregulated market, ATAT plans to compete by offering a bundle of telecom services—local, long-distance, and callular calling, plus data and video services—local, long-distance, and callular calling, plus data and video services—local.

BUGGING THE BELLS: AT&T discounts will pressure local carriers

vices. AraT isn't discussing how it will price local service or its bundling plans. But says Shaun P. Gilmore, ATST'S Northeast states president: "The local-services part of a package of services could be discountad." In other words, ATST can use prefits from long-distance or satellite TV to pay for local discounts. But first ATST must have local service to offer. To come up with a product, ATAT is developing a complex strategy of reselling, partnering, and building its own facilities both wired and wireless connections to homes and businesse At the start, the mix will depend on state and federal regulators, who must rule on a hage range of competitive insues, including guidelines for the wholessis discounts that the local carriers must offer resulters At Mission Control, color-seded mans depict Afar's progress across the country—showing the status of resals negotiations in every state and the discounts determined by state regulators so far. The team also scrutinises regular progress reports from the seven new regional vice-pres dents. Right now, the focus is on California, Georgia, Illinois, Michigan, and Connecticut, where local trials begin on Mera ... (above the retail rate) Take a shortcut to savings. Transfer to the state of the st

118 BUSINESS WEEK / JULY 8, 1996

Mission Control is also working on another problem: Finding the right combination of products and pricing to persuade emsumers to spend their communications dollars with ATAT. More than the \$12 or so a month that consumers spend on local calling, aret wants to grab a big chunk of the \$100 to \$200 a month they spend on electrunic communications: local and longdistance calling, cable 17, online services, paging, and wireless.
So the folks in Basking Ridge are

poring over reams of data on the buying habits of their 80 million residential customers. Arat figures it can use the information collected from its long-dis-

tance and wireless ag bills, Univer-Card records, and online services to come up with prises, products, service otherings, and advertising schemes terreted at narrow market segments. Customers who use wireless phones to keen track of the kids might be targets for pagers.

Busy travelers might be offered special discounts on credit-card calling. "V for our training, beling, marketing, everything, according to demographic

and geographic pat-terns," says Jumph P. Nacchio, executive vice-president of ATRY'S Communer & Small Business Div. Most of all, ATST will be selling its brand-which company keeps before the public with a \$700 million annual ad budget. Executives love to trot out the fact that most surveys show that 30% to 40% of all consumers already believe they get their local-calling service from ATAT, even though the company has been out of that business since the breakup of the Bell system in 1984. "Clearly, AT&T will be our biggest competitor," says Solomon D. Trujillo, President of U S West Communications. "It's the largest compeny around, one of the largest compaies in the world."

"manage on us." On the other hand, ATET can't afford missteps that would tarnish its name. It learned that lesson when it started selling its WorldNet Internet service in March, ATAT couldn't keep up with the huge demand for sign-up disks, and customers who subscribed found

that there were service outages and constant busy signals on help lines. ATET is now refocusing its online efforts more narrowly on consumer service (page 120). "Shame on us," says Mandi. "We learned that customers do expect very high quality, and we also need to be reslighte about how strong a drawing card the brand is." Because of the Internet blunder, Mandi says arar has redoubled its efforts to ensure that its local-service

offering is ready to handle huge volumes from the start. ATET's enormous size is a plus in oth-

er ways. With some \$47 billion in annu-

MANDL He says AT&T will break even on local service in two to three venrs. But success depends on the localservice deals it strikes with the Baby Bells

al revenues-2% times the size of the biggest Bell-AT&T ean offer deals the arpetition will be hard-pressed t.o match. For a preview, look at what ATEC is doing in the handful of states where it has already entered the competition for in-state toll calls. The company is offering three months of free, unlimited instate toll calls to Illinois residents. In Connecticut. the deal is 5e a minute on all in-state toll calls for a year. ATET customers in 18 states can also get special deals on the equipment and programming provided by Directy, the Hughes Electronics

Corp. antclite-rv service. Then there's that Internet offer that drew such a big response unlimited access for ATAT customers for \$19.96 a month, or five free hours a month for one year.

For all its big plans, though, ATAT is still at the mercy of the local phone companies. The kind of discount deals it can strike with them for buying local service will be the key to how quickly ATET can gain market share and whether it can meet Mandl's profit target. The Telecom Act says that the Baby Bells, Gre Corp., and other local carriers must offer their service to potential competitors at the retail rate mime "avoidable costs"—the money they save in marketing, billing, and the like by not handling customers directly.

No surprise, there's a wide gulf between how the local carriers, their wholesale customers, and the state regulators calculate those costs. U S West, for example, proposed a formula in Colorado that actually puts the wholesale price higher than the retail rate, arguing that its local consumer rates now are heavily subsidized. Connecticut regulators came up with a similar interim formula. Most state public service commissions have been more generous— Tennessee and-llinois regulators are recommending 25% and 22% discounts, respectively.

ATAT has one edge in these resale battles—experience. John D. Zeglis, general counsel of ATAT, represented the company in its efforts to keep MCI Communications Corp. out of long distance back in the 1970s. "I was on the other

sidential discou OUTSIANS \*\* 0% business & al discount 1% business & residenial discount 🥞 🐇

DATE ATET

100 m side, resisting every effort to intercon-nect to our network," he says. "I have the work's record for losing those same arguments from '68 on." Zeglis figures the company will end up in arbitration in all 50 states, and besed on his own lack of success with arbitrators back in ATAT'S monopoly days, he's confident that the Bells will lose every time. For their part, Bell executives routinely accuse ATET of dragging out the negotiations in order to score points with regulators. The long-distance giant says the local phone companies aren't budging from unacceptable discount offers. 'Our job is to create an environment that's conducive to competition—not to subsidize our competitor," snaps Ameritech Corp. Chairman Richard C. Notebeart.

ALL IN COME. Long term, ATST says it would just as soon control its own local networks. The cost of building is staggering. Constructing "local loops" in the top 50 markets could cost upwards of \$5 billion, industry analysts estimate. ATAT does plan to build facilities in the largest merkets and has already started in Los Angeles, Chicago, and New York For the rest of the country, "we want to use other people's assets and capital everywhere we can," says Harry S. Bennett, vice-president of ATAY'S Local Services Div. Bennatt says aran will partner with cable operators, competitive access providers (CAPS) that serve businesses with private lines, and even electric utilities. It already has contracted with five CAPE that serve 70 cities.

The other local play is wireless, arar spent \$12 billion two years ago to buy McCaw, the nation's largest wireless calling operator. It is converting that network from analog to digital and is building a nationwide wireless network based on all-digital personal communications services (PCS) technology. By late 1997 or early 1998, says Bennett. 80% of the country will be covered by an all-digital arar Wireless network. At that point it might be viable to offer wireless as a local-service alternative.

Ultimately, AT&T wants to offer any and all of these options. It can't afford not to. The Baby Bells are all gearing up to enter long distance—and other services including cable Ty—and AT&T figures the best way to heng on to its existing customers is to sell them a lot more. "All of our market research shows that the customer prefers to have local and long distance treated as one," says Mandl. Expect a lot of late nights for the Mission Control team if they want AT&T to be the one.
